

AVNEESH KUMAR

Data Analyst | SQL | Power BI | Excel | Python

Hyderabad, India | 6306343200 | dev.avneeshkumar@gmail.com
github.com/dev-avneeshk | linkedin.com/in/devavneeshk | wavio.codes | lasyly.me

SUMMARY

Data Analytics graduate with hands-on experience in SQL, Excel, Power BI and Python for data cleaning, exploratory analysis, KPI reporting and dashboard development. Experienced with relational databases, API-based data extraction, ETL pipelines, data visualization and anomaly detection.

TECHNICAL SKILLS

Data Analysis: SQL, Python, Pandas, NumPy, Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, Data Visualization, KPI Reporting, Trend Analysis

Business Intelligence: Power BI, DAX, Power Query, Data Modeling, Dashboard Development, Interactive Reporting, KPI Dashboards

Excel: XLOOKUP, INDEX-MATCH, SUMIFS, COUNTIFS, IF/IFS, Pivot Tables, Conditional Formatting, Data Validation, Power Query, Excel Dashboards

Databases: PostgreSQL, MySQL, Neo4j (Cypher), Relational Database Design

Data Engineering & APIs: ETL Pipelines, Data Extraction, Data Transformation, REST APIs, API Integration, Supabase

Machine Learning: scikit-learn, Anomaly Detection, SHAP, Graph Analytics

Tools: FastAPI, Node.js, Docker, Git, MLflow, CI/CD

Achievements: 4th place, ByteVerse 1.0 (100 teams); national-level hackathon winner; entrance-test scholarship recipient

PROJECTS

lasyly.me - Sports Analytics & Community Platform (lasyly.me)

2025 - Present

- Developed a sports analytics platform across 3 sports (NBA, tennis and football) for live scores, player-prop analysis and accountability tracking.
- Integrated 4 live data sources (BALLDONTLIE, Prop-Odds, nba_api, YouTube Data API v3) plus reverse-engineered ESPN endpoints to structure live analytics data.
- Built an adaptive-polling Supabase/Node.js pipeline processing ~2,000+ events/day while cutting redundant API calls by ~30% vs. fixed-interval polling; designed a React dashboard tracking 15+ prop metrics in near real time.

Sentinel - Financial-Crime (AML) Detection Platform

2026

- Built a rules-based + ML anomaly-detection workflow evaluated on ~10,000 synthetic transactions, flagging ~3-5% as high-risk.
- Added Neo4j graph analysis surfacing suspicious relationship clusters across 500+ entities, with SHAP explainability for transparent and auditable results.
- Developed Power BI dashboards covering 10+ KPIs for case management and anomaly monitoring; integrated an LLM-powered investigator using RAG, tool-calling and FastAPI.

City Agent - Urban Monitoring Dashboard

2026

- Built a real-time dashboard ingesting live traffic/civic API data across 5+ endpoints for city-level anomaly monitoring; placed 4th nationally out of 100 teams at ByteVerse 1.0.

NBA News Telegram Bot - Automated News Aggregator

2025

- Built a Python pipeline aggregating news from 5+ sources and auto-publishing to Telegram with under 5-minute source-to-post latency.

EXPERIENCE

SkillBanc - Frontend Developer (Remote)

Jun 2025 - Jul 2025

- Built and shipped mobile app UI features using Flutter and Dart as part of the core frontend team.
- Collaborated with backend and design teams to implement responsive, cross-platform screens and components.
- Fixed UI bugs and improved app performance and responsiveness across Android and iOS builds.

EDUCATION

ICFAI Tech, Hyderabad, India

2026

Bachelor of Science, Data Analytics
